

FELT

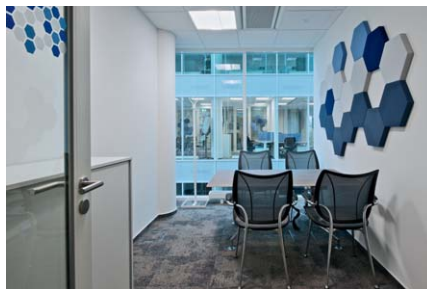

acoustic and
aesthetic solution

SCS SOFTWARE

FELT

Felt products offer visual diversity and individual arrangement in the interior forming vertical and horizontal pictures. They enable the application of great creative freedom to separate or cover surfaces from the walls to the ceiling. The fantastic qualities of PET felt with high acoustic performance also include a sustainable and environmentally friendly life-cycle with recyclability.

The designs can also be visually very appealing.

Felt wall panels, ceiling panels, desk-mounted screens and other acoustic elements ensure greater speech intelligibility, comfort, improved concentration and performance in the workplaces in which they are used. Unlimited colour options mean they can be designed to form part of the overall office colour scheme in combination with fabrics Gabriel Cura used on seating upholstery.

We are proud that we can represent the sustainable economy by using recycled and harmless materials during the entire production process.
